

# Who is

- A Service-Disabled, Veteran Owned Small Business
- Team of Veteran Professionals with over 100 years of UAS operational and training experience
- Services, Consulting and Instruction on Autonomous Air, Ground, Maritime and Subsea systems
- Subject matter experts on multiple platforms in the UAS industry
- Overlapping experience from concept designs to full fledge system development and implementation
- Independent thinkers and acumen on all aspects of UAS
- Security Clearance for each member working on classified projects
- Poised for government contracts

# Our Location and Partner

Designated as one of the UAS NAS Integration Test Sites, which is under the University of Alaska, Fairbanks. PPUTRC.

- UAS Range covers 14,000 square miles, from high desert to 10,000 ft peaks.
- Adjacent to Boardman MOA (Restricted Airspace)
- 50'x50' dedicated UAS operations area (or greater)
- Over 300 VFR days a year (95%)
- Class Delta airspace that is managed by a UAS experienced Control Tower
- Hangers available for lease
- Great rates for flight operations

## Our Mission

Our industry is at a turning point where expectations of technology is surpassing the requirement for training at a base fundamental level. Part 107 is not enough to understand how to operate a UAS or operate in the National Air-space System with other entities.

With the rise of a young industry, it requires a solid foundation with proper nurturing to further growth. It will stifle the growth and leave the industry with a void of experience-based teachings.

We believe we can assist in the formation of that foundation. With our experience being robust, we will be able to help companies from small to large, new or old, get the information they need to grow in the industry and be successful.

Volatus specializes in first principle instruction, consulting and integrations for Land, Air, Maritime and Subsea autonomy applications and products.

### Services

- **Customized Operator training instruction**
- **Courseware Development and implementation**
- **Ground Station Design/ Implementation**
- **UAS Flight/Ground Crew Staffing and training**
- **Maintenance and Crew tracking software, customizable to platform**
- **Aircraft/Vessel Integrations**
- **Electrical diagnostics and minimum requirements determination**
- **Programming and Configuration of system architecture**
- **Networking of internal systems for separate systems that can be put onto a local network**
- **Chase Plane**
- **IRAD Services include: Objective new equipment testing and validation**

### Consulting

- **COA Authorizations**
- **FAA Part 107, 135 Waivers and Exemptions**
- **Regulation Compliance**
- **Risk Mitigation**
- **Product Innovation**
- **Strategy Development**
- **UAS Aviation Safety**
- **UAS Asset Optimization**
- **Command/Control Software and Equipment**
- **Standard Operating Procedures with UAS**
- **Airframe/Vessel Selection**
- **Engine/Motor Selection**
- **Sensor Selection based on application and cost**
- **Land, Air, Maritime and Sub-sea applications**
- **Configuration Management**

## Partners

Providing full spectrum support for all parts of the UAS selection through implementation. We can tailor every bit of what you need for your application based on budget and mission needs. We truly are your one stop Services/ Consulting shop for all things Unmanned.
